

DERMEDICS™ ECG GEL

+ MEDICAL QUALITY

DERMEDICS™ ECG is a conductive gel designed for medical purposes. It is recommended also for electrotherapy and physiotherapy.

dermedics
SKIN CARE SYSTEM

Overview

- Medical quality with CE mark
- Provides high conductive effect and clear, accurate recording without electrical artifacts*
* Artifact (error) – it is an undesired alteration in data, introduced by a technique and/or technology.
- Has high resistance to drying (high viscosity)
- Provides proper adhesion for electrodes
- Chemically neutral (no interactions with electrode or skin of patient)
- Ideal for long term applications
- Microbiologically pure
- Light yellow colour
- Hypoallergenic
- Water soluble
- Dermatologically tested
- Neutral pH

Ingredients

Polyacrylate base, preservatives, sodium chloride, purified water.

Directions for use

This medical gel can be used for following cosmetic procedures:

- Needle-free mesotherapy:
 - Electroporation (Electrophoresis)
 - Iontophoresis
- Electrology (electrolysis, thermolysis, blend)

Do not use for ultrasonic technology.

This product was created for following medical procedures:

- ECG/EKG long-term applications (e.g. 24-hours recording by Holter method)
- Cardioversion
- Defibrillation
- Psychiatric electrotherapy
- Electromyography (EMG)
- Nerve conduction study and velocity (NCS, NCV)
- Physiotherapy
- Electrostimulation (EMS, TENS)

+ MEDICAL QUALITY

Registered in the European Union as Medical Product Class I (Annex VII, rule 1) according to Medical Device Directive 93/42/EEC.
